

Pixel to Portfolio is a foundation-level graphic design program designed to build strong visual fundamentals and creative confidence in aspiring designers. Students learn core design principles, color theory, typography, branding basics, print media preparation, and AI-assisted design workflows. The program focuses heavily on practical execution, enabling learners to create logos, social media creatives, posters, brochures, and brand identity elements.

Students complete the program with a structured beginner-level portfolio, preparing them for roles such as Junior Graphic Designer, Social Media Designer, Print Designer, or Freelance Creative Designer, and helping them enter the design industry with professional-ready work samples.
